

Wawan Zahari

Freelance UIUX & Frontend Developer

📍 Kuala Lumpur, Malaysia 🌐 wwn.la

Summary

I've been working in the field for about 6 years now for a few startups based in Kuala Lumpur, Malaysia. Being a UIUX Designer or a Frontend Developer to me is not just about getting the job done, but it is also about understanding the problem and finding the best solution.

Work Experience

Freelance UIUX & Frontend Developer October 2017 -

Dream Chorus Sdn. Bhd.

Working with the team on a in-house product called Spreeo; a web-based digital journey app for museum/gallery. Among the biggest challenges while working on this project is, the time constrain and also designing for floor stand touch screen device which is (usually) installed at the museum/gallery. This is my first Vue.js app project.

Freelance Frontend Developer August 2017 - September 2017

VLT LABS Sdn. Bhd. (n.k.a. McKinsey Digital Labs)

Reunited once again with Labs team to work a on project for a client; Axiata Digital Services, for their new product called Boost. My role this time is solely on the frontend development while the team's responsible for the beautiful UIs. This is my first time working on an Angular app.

Freelance UIUX & Frontend Developer June 2017 - July 2017

Motive Interactive Sdn. Bhd.

Working on a project together with Motive team for Graduan Aspire, to revamp their existing dashboard (web-based) app. This is my first Laravel project. The challenge that I faced while working on this project is, that there are a lot of different roles that can access the dashboard. It gets tougher especially when some of the roles is almost identical.

Freelance Mobile App Designer February 2017 - April 2017

VLT LABS Sdn. Bhd. (n.k.a. McKinsey Digital Labs)

VLT LABS has a client in Indonesia looking for designers to work on their mobile app design. Since they're short of hands, Izwan (the co founder) reached me out as he heard that I was looking for a new gig. And 2 months later we've finished up the mobile app design. It was a very interesting experience especially when you're working with one of the biggest conglomerate in Indonesia. This mark as my first mobile app project.

Freelance Web Designer January 2017 - February 2017

Pixelated Sdn. Bhd.

Working with Pixelated for their product landing page (KATSANA) has been a breeze as both the client and I have the same understanding on the project.

Freelance Frontend Engineer October 2016 - February 2017

TeleMe Sdn. Bhd.

TeleMe was looking for a help to revamp their current product. I hooked them with a friend of mine (a designer) to help come up with the new design for their product while I can focus on the frontend development. I also was assigned to clean up the code structure - restructuring CSS, HTML (Rails) and minor JS. TeleMe platform before this was built by freelancers. The problem here is, different developers has different coding styles. Restructuring the codes is the biggest challenge I faced while working on this project.

Freelance UIUX Designer August 2016 - December 2016

Helpr Asia Sdn. Bhd.

I've been working for Helpr on several projects from time to time. Started from just a simple landing page for one of their product, to designing a dashboard for their customers.

Head of Design February 2015 - September 2016

REV Asia Holdings (f.k.a. SAYS Sdn. Bhd.)

I was appointed as the Head of Design for REV Asia after about 2-3 years working with the company. Working closely with Grace Look (previous Product Manger) has taught me a lot on meeting the expectation for both from sales point of view and the developers.

UIUX & Frontend Engineer October 2012 - January 2015

REV Asia Holdings (f.k.a. SAYS Sdn. Bhd.)

After almost 2 years working at the previous company, I felt the need to find something that can offer more challenges. As I was speaking to Khailee (the founder) during the interview, he kept stressing out how important it is to keep growing, keep learning new things. And that has been my new mantra ever since.

Working here has been great as I got to work on different products like SAYS, 8Share, KLIPS and the hiring website. My biggest challenge while working on these products is the UX part.

Web Designer November 2010 - September 2012

Slashes & Dots Sdn. Bhd.

Azrul Rahim (the co founder) opened the door widely even though he knew I was at that time still new to web design and frontend development. I was first assigned to work on just the design for some of Jomsocial features and slowly I gained the team's trust to start working on the frontend development including one of their new product called Offiria.
